Senior Web Developer

Remote   **Full-time**   [**Contact**](#)

Peer builds a gamified social ecosystem on a proprietary, immersive 3D map. It consists of a mobile app and a web marketplace, and interactions are based on location sharing. This is just the beginning—the product vision has a broader horizon.

We are building a meta-world that becomes a literal peer to your real world.

The team you will be joining is not just playing around with social media - we are a team of tech, product, art, and design seniors creating technologies to enable innovative social experiences that have not existed before. And we are just getting started.

About You

We are seeking a highly skilled and experienced Full Stack Web Development candidate with a strong background in frontend (React framework) and backend programming. You will play a pivotal role in architecting, designing, and leading the development of our web frontend and backend systems. Your expertise will be instrumental in shaping the technical direction of our projects, mentoring junior developers, and ensuring the highest level of user experience, stability, performance, and security of our websites.

You will manage and drive the development of our web-based projects in conjunction with Peer Mobile App teams and Peer Contractors to meet the company's specific directives and roadmap.

The role requires:

1. Development: Hands-on development of new user-facing features using React.js. This includes:

a. Building reusable components and front-end libraries for future use;

b. Translating designs and wireframes into high-quality code;

c. Optimizing components for maximum performance across various web-capable devices and browsers.

2. Technical Leadership: Oversee the effort and provide technical leadership and guidance to a team of front-end and back-end developers. Collaborate with cross-functional teams to define technical requirements, architecture, and design for front-end and back-end code and infrastructure.

3. Architecture, Design, and Coding: Maintaining existing systems and driving the team's adoption of best practices, design patterns, and coding standards. Architect APIs, services, and integrations to support front-end applications and third-party services in collaboration with the backend team.

4. Performance and Optimisation: Identify performance bottlenecks and optimize system components for maximum speed and efficiency. Work with the DevOps team to deploy and manage backend services in production environments and create a robust, fault-tolerant CI / CD pipeline.

The candidate profile requirements:

- A bachelor's degree in computer science or a related field.

- 7+ years of professional experience in software development, focusing on frontend and backend web development.

- Proficiency in React is essential as knowledge of one or more backend programming languages (the backend is written in Ruby, and the app backend is in Go)

- 2+ years experience leading a team.

- Solid understanding of cloud technologies and experience deploying web projects in cloud environments (e.g., AWS, GCP).

- Experience with web3 is a strong plus.

- Flexibility to work with a team from different cultures (mainly EU, UK, and UAE timezones)

- Excellent communication and teamwork skills.

Benefits:

- Competitive salary.

- Opportunity to work on cutting-edge projects and innovative technologies.

- Professional development opportunities and continuous learning.

- Collaborative and inclusive work culture.

- Fully remote work.
